Cnestull Colo. Aug. 18. /77.

Dear Doctor:

My flowering specimens of Q. Emoryi when I cut them from the trees had plenty of old leaves on them; but they for the most part fell off before the drying process was at an end. It is so far from being deciduous that in N. M. it is commonly called "Live oak". The leaves all remain on, until the flowering season; which is April; or early May in some localities

Sincerly Yours.

Edwd L. Greene.
